

10th November,2020

Follow up: upper respiratory tract infection

Dear Parents,

As informed by the center for health protection on Tuesday, November 10, 2020, a total of 7 students, aged between 3 and 5 years old, have developed symptoms of upper respiratory tract infection in our school. At present, the situation of students is stable. I wish the children a speedy recovery! According to the instructions of the Centre for health protection, the school will be suspended for three days from November 11 (Wednesday) to November 13 (Friday). All student and parent activities will be cancelled and students will be allowed to stay at home for rest. The school will keep a close eye on the development of the situation and keep close contact with the health protection center. If it is necessary to extend the suspension time, we will inform you by telephone and upload the latest news to the school website on or before November 14.

At the same time, the school has hired a professional company to strengthen the cleaning and disinfection of the school. We will also urge all staff to pay attention to personal and school environmental hygiene to prevent the spread of infectious diseases.

The school calls on parents to cooperate, pay attention to students' personal and environmental hygiene, and cooperate with the school's measures to prevent the spread of upper respiratory tract infection on campus. If not necessary, parents should avoid taking their children to crowded and poorly ventilated public places. Parents should pay attention to their children's physical condition. If they feel unwell, especially fever, cough and runny nose, they must seek medical advice and stay at home to rest. They should avoid going to school until at least two days after the fever has subsided and inform the school of the situation as soon as possible.

Parents are urged to follow the health guidelines of the Centre for health protection. Parents can visit the website of the Centre for health protection for information on the symptoms, transmission routes and prevention methods of upper respiratory tract infection ( <http://www.chp.gov.hk> ) .

Thank you for your cooperation.

Yours sincerely,

*Chu Fung Chiu*
